## **LASER ALIGNMENT and VIBRATION ANALYSIS**

Heartland Pump Rental & Sales, Inc. has purchased laser alignment and vibration analysis equipment.

The vibration analysis equipment is a tool we use to help diagnose equipment problems and failures. It measures movement on any object. We have a model Commtest VB Series that works with pumps and motors.

The laser alignment equipment aligns the couplings between the pump shaft and the motor. By aligning the pump shaft and the motor, you can reduce vibration.

In using this equipment, it is faster to align the shaft, which leads to a reduction in labor costs. It also gives a printout of the alignment which can be used to build a database of your pumps. This is an extremely useful pump maintenance tool.

Our factory trained mechanics are available to either work at our shop, or come to your location to work with you to diagnose and align any of your pumping equipment. All of our mechanics have safety training including OSHA 10 hour and MSHA surface and underground.

For an estimate, or to schedule an appointment, please call 888-272-7143 and we will direct you to the sales representative in your area. Remember at Heartland Pump — WE'VE GOT YOU COVERED!
