TEST TANK

Heartland Pump Rental & Sales, Inc. has a fully staffed electrical department that specializes in repairs of submersible electric pumps. To aid in the repair of these pumps, we have a 4' x 24' x 10' test tank at our corporate headquarters. The tank can be used to test pumps from 2" to 12" diameter.

Once our staff repairs the pump, we use the tank to test performance. The test tank is connected to a Marsh-McBirney Multi-Mag Model 284 control panel. This panel gives us measurements for gallons per minute and PSI. We also check amp draw at different levels of testing. By using the in-system gate valve, we can adjust to vary the head on the pump to give various pump curves.

Heartland Pump uses this tank to test — diesel, electric or gasoline pumps. The test tank is the last step in our repair process. It adds the extra peace of mind, that once we return a pump to our rental fleet or customer, we have completed the repair to manufacturer's pump specifications.

For a repair quote, please call 888-272-7143 and we will direct you to the sales representative in your area. Remember at Heartland Pump —WE'VE GOT YOU COVERED!
